

# Changes made after peer review

## Diagrams

1. Changed arrowheads on all associations and dependencies from closed to open in the class diagram
2. Changed the MemberInfoPane → MemberRegistry association to a dependency
3. Added “...” to classes that contained more attributes and methods than is shown in the class diagram
4. Added a BoatClubDatabase → Boat dependency
5. Added role names for all associations
6. Added multiplicity for all associations where more than one instance can be needed
7. Removed the BoatListPane → InputValidator association to reflect code changes
8. Removed attributes that became duplicate information after role names were added

## Code

1. Added more comments in the code to explain in more detail what each method does, as javaFX in particular is confusing to read and interpret
2. Changed methods that returns a list to return a copy of the list instead of a reference to the original list
3. Renamed some View classes to make it more clear which responsibility they have
4. Moved the InputValidator initialization in BoatListPane to it's inner class BoatInfoPane, as the validator is only used in the inner class

## General

1. Updated included readme file with more detailed instructions on how to run the program executable
2. Updated included readme file with detailed instructions on how to compile the project manually using Eclipse IDE
3. Added an executable .jar file in addition to the .exe file for users with Mac or Linux operating systems
